-Operating System and software reinstallation and data recovery
-Created customer tickets and invoices, managed sales, and occasional service calls

EDUCATION

GRAND VALLEY STATE UNIVERSITY – ALLENDALE MICHIGAN
Information Systems, B.S. – *Expected Graduation: December, 2016*

For over 2 years I pursued a Computer Science degree at Grand Valley State University. During this time, I enjoyed the classes on computer architecture and mathematics. However, as I progressed through my degree, I became increasingly more interested in network administration and project management. It was around this time that I discovered my love for FOSS and Linux and decided that I wanted to work towards becoming a Linux System Administrator. At this point in my education, the only remaining classes that I need to graduate are my capstone and internship.
